BaLL TRaINING machINe

FOOTBALL CANNON

The Football Cannon shoots the ball with a never seen accuracy and consistency, giving both coach and players the best working conditions possible. The latest edition is the third generation, and it is the football industry's flagship serving machine, created with cutting-edge technology.

The Football Cannon from Goal Station helps coaching staff to deliver accurate and consistent passing to players in the training sessions. Often fatigue results in inaccurate passes, misplaced attempts, and ultimately poorer training results. The Football Cannon is the only machine that has a robotic leg that kicks the ball, giving it a real and humanized effect with the real curves of the ball. On top of optimizing the training, it also reduces the risk of getting injuries from continuous passing and crossing.

Improving and fine-tuning core competencies and skills in football requires special training – individually, in groups, and in full teams. Some of the most important elements in special training are repetition and precision of the exercises aimed at improving player competencies. The Football Cannon ensures repetition and precision.

The Football Cannon also ensures a systematic training method where goalkeepers, defenders, and strikers can train ball reception and handling by means of various shot patterns. The Football Cannon can be programmed to make and repeat different shots, variably according to own wishes.

The machine kicks the ball with different levels of speed, making it applicable to use for all ages and levels.

The individual shots can be programmed both from the monitor and the remote control. With the remote control in the hand, the coaches can now focus on the players rather than handling the machine.

In training

The machine can cross the ball in order to train defensive and offensive set pieces

The machine can cross the ball to players for individual training with 20 balls in the feeder at a time.

The remote control allows the player to create variations.

Accurate and precise kicks from the machine optimizes the training intensity and clearly reduces the downtime. Replicate crosses with an ease.

Goalkeeper Training

The machine will prevent the goalkeeping coaching staff from getting injured associated with countless kicks to the ball. Unlike alternative machines, The Football Canon kicks the ball, giving it a humanized effect and the goalkeeper is not able to detect the direction beforehand.

The goalkeepers are now able to create individual training with a 20-ball capacity. The coaches can move around as to watch the goalkeepers from different angles, allowing the coaches the opportunity to focus on guidance and observations. Inaccurate passing is now in the past!

Defending and finishing

Attacking players can now receive the ball from different angles, aiming to improve their first touch and striking capabilities. Defending players can

Create a competitive advantage for your team with the Football Cannon. Use the Football Cannon in your training to prepare your team for match-related situations.

For example, if your opponent has strong headers, then you might want to practice your clearings from inside the box. You can also concentrate on defensive aspects such as diagonal crosses, passes behind the defensive

Football Cannon in training

Goalkeeper: Always precise shots taken against and don't rely on the player

Defense: Train with precise set pieces and clearing of corner kicks

Midfield: Receive and train deep long balls to the wingers/strikers

Attacker: Precise long balls or set pieces to the strikers

Coach: Optimized ball precision and training for the players
